## Soft markets; strong cash position

### **Waiting for Qinghai**

- Weak macro demand (autos, housing, power tools) and soft Mg prices continue the tough conditions seen in 3O23
- Cost inflation, particularly in overheads, adds additional pressure to earnings
- Consistency of messaging from Qinghai partner supports slightly more optimism re 2H24 restart

MGL reported its CY23 result with Gross profit of \$19.2m which was 6.2% below MSTe and 50% below pcp. Both segments were weaker with the usual trend of much more volatility in the Metals business compared with Anodes. Overhead inflation further contributed to earnings decline.

Net operating cash flow was strong at \$12m, helped by inventory unwind due to lower sale volumes and Mg price; more capital release from working capital expected in CY24.

MGL's Qinghai Mg alloy plant is awaiting the restart of its Mg supplier. Consistent confirmation around a 2H restart is encouraging. We think the upside optionality from Qinghai makes it worth the wait — with a well-funded dividend in the meantime.

#### **Investment Thesis**

MGL's supercharged earnings of CY22 have now unwound with the industry struggling to find equilibrium. Magontec retains strong positions in both the Anodes and the Recycling industries that we expect will ensure quality returns in the medium-term.

The Anodes business has shown relatively stable earnings and high market share in the niche sector supporting a healthy valuation. The recycling business in Europe holds a strategically valuable market position – albeit its earnings are volatile. It will be particularly important in extracting value from the supply chain when Qinghai starts.

The timing of the Qinghai plant's restart is uncertain with hope around 2H24; if the plant achieves just 50% of capacity utilisation, we estimate it would add \$0.45 per share to our valuation.

#### **Valuation**

1H24 is starting as 2H23 finished – soft. We expect some recovery in 2H from easing macro, recovery in demand for electronic anodes, and a restart of Qinghai later in 2H24. We value Magontec on a sum-of-the-parts basis. The relatively stable and growing Anodes business is valued on an earnings multiple and Metals business (recycling) on a capacity multiple based on historic transaction multiples. We do not include any contribution from Qinghai at this stage, given the ongoing uncertainty surrounding the restart of its supplier – QSLM; albeit there has been more positive signs in recent months.

#### **Risks**

Risks include the failure of the Qinghai cast house to receive the planned magnesium metal, and the breach of agreements by QSLM. A deteriorating competitive environment and a potential loss of access to capital add to the risks.

#### **Equities Research Australia**

#### Industrials

**Andrew Johnston**, Senior Analyst andrew.johnston@mstaccess.com.au

Founded in 1953, MGL's operations involve the manufacture of magnesium anodes for corrosion protection in water heaters, and manufacture and recycling of magnesium alloys that are sold into the global auto industry. The Company has manufacturing facilities in Europe and China and sales in those regions, as well as the US. Its primary alloy production facility in Qinghai, China is operating at a loss, awaiting the restart of its magnesium supplier. Once restarted, MGL will be one of the few suppliers of low-CO2 magnesium alloys in the world.

## CY23 Result

Magontec's CY23 result was a little tougher than we were expecting when we last published (early November 2023). The trends that we were observing and went into our forecasts at that point have continued. Gross Profit of \$19.2m was down 6.2% on what we were expecting and underlying EBITDA \$6.9m down 12.3%. Underlying NPAT was \$1.6m compared with \$16.5m last year (MSTe \$3.4m).

Strong cashflow with Net Op Cashflow of \$11.4m due to working capital release as the magnesium (Mg) price fell. Major profit drivers were low Mg prices and soft end markets of autos, and hot water appliance manufacturing. Net cash at bank was a healthy \$8.7m.

#### Magnesium price

The soft magnesium price was a significant contributor to the weak result compared with CY22. The weaker price, however, did contribute to cash flow with lower working capital releasing \$9.2m of cash. (Magontec purchases raw magnesium or recycled magnesium alloys and converts it into end products such as anodes, or magnesium alloys which it resells. Consequently, working capital is highly sensitive to the magnesium price.)

Refer below to the Segment section for a discussion around the macro drivers for each division.

#### Half yearly performance

The deterioration in 2H is obvious in the following table. The impairments were spread across 1H and 2H and related mostly to inventory write-downs.

| EBIT (reported)               | 0.3     | 0.1     | 2.0     | 5.3     | 19.9    | 4.6     | 3.5     | -1.0    |

#### **Overheads**

Overheads have increased significantly over past few years. In relation to CY23, we note that R&D costs and corporate costs are both up by ~30% on the previous year. R&D costs increased by \$0.270m in CY23 vs pcp and reflect salary increases in China as well as additional expenditure on the development of specialist alloys. In the Corporate line where costs increased by \$1.0m in CY23, there were a number of one-off items (including a customer dispute resolution, costs in relation to potential acquisitions), which have not specifically been quantified and in addition, management called out significant wage inflation in Europe. For the purposes of forecasting, we estimate the one-off items across all of CY23 to be \$0.5m.

#### Segment analysis

The Anode business is significantly less volatile than the Metals business even though in 2H23 revenue is down 7%. Gross margins are below 30% - the first time since 1H20.

| Metals Gross Profit (AUDm) | 2.3     | 1.7     | 2.0     | 3.6     | 15.2    | 5.3     | 4.4     | 0.9     |
| margin                     | 8%      | 5%      | 6%      | 9%      | 25%     | 12%     | 14%     | 4%      |
| Qinghai                    |         |         |         |         |         |         |         |         |
| TOTAL Gross profit         | 5.3     | 6.9     | 7.7     | 11.5    | 26.8    | 11.8    | 14.1    | 6.9     |
| margin                     | 11.7%   | 13.8%   | 15.1%   | 17.9%   | 28.5%   | 18.3%   | 23.3%   | 16.4%   |

The Metals segment weakness was affected by the weak auto and hand tools markets, with lower prices reducing the availability of scrap metal. This business is historically volatile with both the full year and 2H reflecting lower revenue and tighter product pricing.

In the Anodes business, magnesium volumes were down 7% compared with revenue down 12% (reflecting the drop in the Mg price). 80% of revenue in this division comes from product sales for replacement of anodes or replacement of water heaters. This helps limit the impact of the weaker housing market – particularly in China.

Figure 5: Mg anodes sales (k tonnes)

Figure 6: China housing starts (m sqm)

What is missing in this analysis, however, is the impact on revenue and earnings from the sale of electronic anodes. MGL does not break out the contribution from this product group, other than to say it is an increasing important part of this segment. The most important growth driver for electronic anodes is the growth of the heat pump market – all of which use electronic anodes. After more than doubling in the three years to 2022, the European heat pump market fell sharply in 2H23 due mostly to regulatory missteps in Germany. This has meant that manufacturers had been left with too much inventory after building inventory rapidly to meet rising demand. We expect that this has contributed to the weakness in 2H revenue and gross margins.

#### Operational shutdowns

Magontec undertake necessary maintenance on its Romanian plant, and the anodes plant in Xian plant was upgraded (taking longer than expected) over CY23 with both contributing to the weak result. These items to capex of \$3.8m for CY23 – up from \$1.9m in CY22.

Report prepared by MST Access, a registered business name of MST Financial services ABN 617 475 180 AFSL 500 557 MST Access has been engaged and paid by the company covered in this report for ongoing research coverage. Please refer to full disclaimers and disclosures.

#### **Balance Sheet**

The positive side of lower magnesium prices is that cash was released from working capital. We estimate total capital release of \$9.2m in CY23 compared with \$14.4m being absorbed in CY22. Net cash was \$8.7m compared with \$2m a year ago.

#### Qinghai

MGL has reported improving consistency of communication from QSLM - the supplier of Mg that is adjacent to its alloy cast house in Qinghai. Steady, consistent progress would appear to be occurring with repeated statements regarding a restart of liquid Mg production in 2H24.

## Forecasts, valuation and risks

#### Guidance

Management is expecting a recovery in the Anodes market in CY24 and continued long-term growth. The core of the Metals segment is its European recycling business which has been softer over CY23. While not providing any guidance as to the state of this market in CY24, MGL does expect improved contribution from recently developed specialist and ancillary products in Europe.

#### **Forecasts**

We expect volumes and earnings in 1H24 to be similar to 2H23 in both the Metals and Anodes businesses.

In 2H, we expect some improvement in underlying macro factors in housing, autos and power tools that will drive demand in both Metals and Anodes business. While MGL does not quantify the contribution from electronic anodes, we expect that it is meaningful. Recovery in demand is expected as heat pump demand recovers in Europe, and Germany in particular, as inventory is unwound and regulatory certainty improves as discussed above.

We had previously expected 10k tonnes of alloys from Qinghai in 2H24 following a restart of its adjacent supplier. While we still expect this to occur, we have halved our expectation of product from Qinghai to 5k tonnes. We note that total capacity of MGL's Qinghai plant is 60k tonnes per annum.

Source: MST Access

Note that we now assume Qinghai will restart in the second half of CY24 (previously first-half), factoring in a degree of uncertainty to this forecast.

#### **Valuation**

We use a sum of the parts valuation methodology for Magontec. This consists of a 12-month forward valuation based on capitalising EBITDA (including a share of overheads) from the Anodes business using an EV/EBITDA multiple derived from a list of comparable companies which is then discounted by 30%. We use the same valuation of the recycling business (part of Metals division) used in our initiating coverage report here which was based on the sale of a magnesium recycling company that was similar to Magontec's European recycling business report.

While we have estimated that Qinghai could be worth \$0.45 per share at 50% capacity utilisation, we do not include anything in our current valuation given the ongoing delays and uncertainty associated with the restart of its supplier.

Source: MST Access

To estimate a comparable company multiple, we have applied a 30% discount to companies which we regard as broadly similar. Size difference makes comparisons difficult, but we think that the Anodes business is a quality business with high market shares and relatively stable, growing revenues and earnings.

#### Risks

- QSLM magnesium production does not restart or does not produce the contracted level of magnesium metal
- MGL loses its licence to operate in the Qinghai province
- Unforeseen operational (including safety) problems at Qinghai, or any of its other processing plants in China, Germany and Romania
- · A dramatic deterioration of the competitive environment in one or more of its markets
- A loss of access to capital which is particularly important to fund working capital which increases in line with sharply rising magnesium prices

Report prepared by MST Access, a registered business name of MST Financial services ABN 617 475 180 AFSL 500 557 MST Access has been engaged and paid by the company covered in this report for ongoing research coverage. Please refer to full disclaimers and disclosures.

...

- We may have underestimated the extent to which demand for structural magnesium in vehicles will offset the decline in demand for magnesium used in engines and drive chains as electric vehicles replace internal combustion engines
- We may have over-estimated the long-term demand for "green" magnesium from the transport industry

### **Investment Thesis**

MGL operates three magnesium processing businesses with processing plants based in China and Europe. The Cathodic Corrosion Protection (Anodes) segment produces anodes for residential and commercial water heaters in China and Europe which are sold to original equipment manufacturers (OEMs) in China, Europe and the US. The Metals segment has two elements: a magnesium alloy Recycling business in Europe whose customers are motor vehicle manufacturers and Tier 1 suppliers; and a magnesium alloy production business in Qinghai, China sited next to a magnesium plant (QSLM) from which it will receive molten magnesium once this plant restarts. This plant halted production in late 2019, and it is expected to restart supplying molten magnesium to MGL's Qinghai facility in the second half of CY24.

From a valuation perspective, we consider MGL in three parts: Anodes, Recycling and Qinghai.

# Anodes and Recycling – aggregate value underpins the current share price

The Anodes business produces traditional magnesium anodes and electronic anodes that are used in water heaters to prevent corrosion. Volumes show solid stable growth over the past 5 years with MGL having high market share in what is a niche sector. This is a stand-alone business and we have therefore valued it separately on an EV/ EBITDA basis using the average multiple of comparable companies discounted by 30%.

The Recycling business does not report separately, but its high market share as an important supplier to the European and North American markets gives it strategic value. We estimate its value based on the price achieved in 2019 on a capacity based multiple for a smaller but similar business.

#### Qinghai – serious upside but out of MGL's control

MGL's Qinghai magnesium alloy cast house was designed to be supplied molten magnesium by Qinghai Salt Lake Magnesium Co. Ltd (QSLM). The business is currently loss-making as MGL is sourcing a nominal amount of high cost magnesium to ensure at least some of its customers continued to get supplied. The timing of the restart of QSLM operations is proving difficult to predict with its restart subject to on-going delays.

Qinghai is the source of substantial upside but is wholly dependent on the supply of molten magnesium from QSLM. Should MGL's Qinghai plant achieve 50% capacity utilisation by the end of CY25 (based on product from QSLM), this would add a further \$0.45 per share to our valuation.

We are not aware of the details of the supply and access contract between QSLM and MGL and the potential scenarios should QSLM not meet its contractual obligations to supply magnesium metal to MGL Qinghai's alloy production facility. We note that QSLM has a 29% stake in MGL and the general manager of QSLM has recently been appointed as a non-executive director at Magontec.

# Methodology & Disclosures

MST Access is a registered business name of MST Financial Services Pty Ltd (ACN 617 475 180 "MST Financial") which is a limited liability company incorporated in Australia on 10 April 2017 and holds an Australian Financial Services Licence (Number: 500 557). This research is issued in Australia through MST Access which is the research division of MST Financial. The research and any access to it, is intended only for "wholesale clients" within the meaning of the Corporations Act 2001 of Australia. Any advice given by MST Access is general advice only and does not take into account your personal circumstances, needs or objectives. You should, before acting on this advice, consider the appropriateness of the advice, having regard to your objectives, financial situation and needs. If our advice relates to the acquisition, or possible acquisition, of a financial product you should read any relevant Product Disclosure Statement or like instrument.

This report has been commissioned by Magontec Limited and prepared and issued by Andrew Johnston of MST Access in consideration of a fee payable by Magontec Limited. MST Access receives fees from the company referred to in this document, for research services and other financial services or advice we may provide to that company.

MST Financial also provides equity capital markets ("ECM") and corporate advisory services through its capital markets division, MST Capital Markets ("MST Capital"). MST Capital provides these services to a range of companies including clients of the MST Access service. As such, MST Capital may in future provide ECM and/or corporate advisory services to the company that is the subject of this research report and, accordingly, may receive fees from the company for providing such services. However, MST Financial has measures in place to ensure the independence of its research division is maintained, including information barriers between its Capital Markets and Research teams. In addition, neither MST Access, not any of its research analysts, receive any financial benefit that is based on the revenues generated by MST Capital Markets or any other division of MST Financial.

The analyst has received assistance from the company in preparing this document. The company has provided the analyst with communication with senior management and information on the company and industry. As part of due diligence, the analyst has independently and critically reviewed the assistance and information provided by the company to form the opinions expressed in the report. Diligent care has been taken by the analyst to maintain an honest and fair objectivity in writing this report and making the recommendation. Where MST Access has been commissioned to prepare content and receives fees for its preparation, please note that NO part of the fee, compensation or employee remuneration paid will either directly or indirectly impact the content provided.

Accuracy of content: All information used in the publication of this report has been compiled from publicly available sources that are believed to be reliable, however we do not guarantee the accuracy or completeness of this report and have not sought for this information to be independently certified. Opinions contained in this report represent those of MST Access at the time of publication. Forward-looking information or statements in this report contain information that is based on assumptions, forecasts of future results and estimates of amounts not yet determinable, and therefore involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of their subject matter to be materially different from current expectations.

Exclusion of liability: To the fullest extent allowed by law, MST Access shall not be liable for any direct, indirect or consequential losses, loss of profits, damages, costs or expenses incurred or suffered by you arising out or in connection with the access to, use of or reliance on any information contained in this report. No guarantees or warranties regarding accuracy, completeness or fitness for purpose are provided by MST Access, and under no circumstances will any of MST Financials' officers, representatives, associates or agents be liable for any loss or damage, whether direct, incidental or consequential, caused by reliance on or use of the content.

# General Advice Warning

MST Access Research may not be construed as personal advice or recommendation. MST encourages investors to seek independent financial advice regarding the suitability of investments for their individual circumstances and recommends that investments be independently evaluated. Investments involve risks and the value of any investment or income may go down as well as up. Investors may not get back the full amount invested. Past performance is not indicative of future performance. Estimates of future performance are based on assumptions that may not be realised. If provided, and unless otherwise stated, the closing price provided is that of the primary exchange for the issuer's securities or investments. The information contained within MST Access Research is published solely for information purposes and is not a solicitation or offer to buy or sell any financial instrument or participate in any trading or investment strategy. Analysis contained within MST Access Research publications is based upon publicly available information and may include numerous assumptions. Investors should be aware that different assumptions can and do result in materially different results.

MST Access Research is distributed only as may be permitted by law. It is not intended for distribution or use by any person or entity located in a jurisdiction where distribution, publication, availability or use would be prohibited. MST makes no claim that MST Access Research content may be lawfully viewed or accessed outside of Australia. Access to MST Access Research content may not be legal for certain persons and in certain jurisdictions. If you access this service or content from outside of Australia, you are responsible for compliance with the laws of your jurisdiction and/or the jurisdiction of the third party receiving such content. MST Access Research is provided to our clients through our proprietary research portal and distributed electronically by MST to its MST Access clients. Some MST Access Research products may also be made available to its clients via third party vendors or distributed through alternative electronic means as a convenience. Such alternative distribution methods are at MST's discretion.

## Access & Use

Any access to or use of MST Access Research is subject to the <u>Terms and Conditions</u> of MST Access Research. By accessing or using MST Access Research you hereby agree to be bound by our Terms and Conditions and hereby consent to MST collecting and using your personal data (including cookies) in accordance with our <u>Privacy Policy</u>, including for the purpose of a) setting your preferences and b) collecting readership data so we may deliver an improved and personalised service to you. If you do not agree to our Terms and Conditions and/or if you do not wish to consent to MST's use of your personal data, please do not access this service.
